PROFILE

Backend-focused Computer Science junior at Polytechnic University of the Philippines with consistent academic distinction (President's List & Dean's List every semester). Experienced in building APIs, compilers, database systems, and real-time applications across team and solo projects. Special contributor to a paper presented at WCTP 2025, an international academic workshop on computation. Seeking backend or software engineering internship opportunities to apply and grow real-world engineering skills.

EDUCATION

Polytechnic University of the Philippines (PUP) | 2023 – 2027 (Expected)

Bachelor of Science in Computer Science — 3rd Year

- Relevant Coursework: Object-Oriented Programming, Database Management Systems, Data Structures & Algorithms, Automata and Language Theory, Natural Language Processing, Principles of Programming Languages

Polytechnic University of the Philippines — Senior High School | 2021 – 2023

- STEM Track | High Honors | Class Rank: 7th

ACADEMIC HONORS & AWARDS

President's List & Dean's List | Polytechnic University of the Philippines | 2023 – Present

Awarded every semester from 1st year through current 3rd year for maintaining outstanding academic performance.

High Honors — Class Rank 7th | PUP Senior High School | 2023

Graduated with High Honors in the STEM track, placing 7th in the graduating class.

PUBLICATIONS & PRESENTATIONS

PROJECT BANTAY: Breadth-First Search and Dijkstra Implementation for Community-Accessible Disaster Response

Special Contributor | WCTP 2025 (14th Workshop on Computation: Theory and Practice) | December 3, 2025
International workshop organized by Institute of Science Tokyo, Chitose Institute of Science and Technology, Kyoto Tachibana University, University of the Philippines–Diliman, and De La Salle University–Manila.

TECHNICAL SKILLS

Languages: Java, C, Python, TypeScript, JavaScript

Backend & APIs: FastAPI, REST APIs, Supabase, MVC Architecture, Finite State Automata

Databases: PostgreSQL, MySQL, SQL

Frontend: React, React.js

Tools & Platforms: Git, GitHub, Maven, Google Workspace, Microsoft Suite, Adobe Creative Suite

ML/Data: XLM-RoBERTa, Python data analysis, BFS/Dijkstra graph algorithms

PROJECTS

Iskonnnect | Backend Developer | Java, PostgreSQL, MVC | github.com/JpCurada/iskonnnect

- Engineered backend infrastructure for a desktop educational resource-sharing app using Java with full database integration
- Implemented secure user authentication and data validation using MVC architecture
- Collaborated with a 7-person team to optimize database queries and improve system performance

BirthCertify | Full-Stack Developer | React.js, Supabase | github.com/tzuyu10/BirthCertify-G9

- Developed a birth certificate request platform with real-time status updates, improving on the PSA Serbilis experience

- Designed and implemented backend logic and database architecture using Supabase
- Delivered a functional government platform alternative with a 5-person team

Bantay | Full-Stack Developer | React, Python, FastAPI | github.com/PMT-BANTAY/bantay-demo

- Built a real-time flood propagation monitoring system integrating DOST/PAGASA data via FastAPI
- Implemented BFS and Dijkstra algorithms for flood simulation and evacuation route optimization
- Delivered a critical disaster management solution with a 9-person team; work presented at WCTP 2025

EAC — Python-Derived Language Compiler | Backend Developer | C | github.com/eac-language/eac

- Contributed to a compiler for a custom Python-derived language (.eac source files) in C, covering the full front-end pipeline: source input → lexer (token output) → parser (grammar validation)
- Solely built the parser component; also assisted with lexer development and contributed to grammar rule definitions

ScamSentry — FSA-Based Scam Detection System | Backend Developer | TypeScript, Web App | github.com/tzuyu10/scam-sentry

- Contributed to a web-based scam message detection system using Finite State Automata to match user-pasted text against known scam patterns
- Added probable scam patterns to the matching engine and helped optimize the probability scoring model for more accurate scam likelihood computation

Microaggression Detection in Taglish Social Media Comments | Backend Developer / ML | Python, XLM-RoBERTa, NLP

- Fine-tuned XLM-RoBERTa to classify Taglish text into microaggression categories (micro assault, insult, invalidation, non-microaggression) based on Sue's taxonomy
- Built a CLI inference pipeline accepting user-inputted sentences and returning per-class probability scores

ManhwaHub — Manhwa Aggregator | Full-Stack Developer | Python, FastAPI | Passion Project

- Built a full-stack aggregator app consolidating content from multiple manhwa APIs including MangaDex and Comix
- Designed and built the API integration layer using FastAPI and a unified data model for cross-source content retrieval

CERTIFICATIONS

- **Data Literacy Certification** — DataCamp | July 2025 | [Verify](#)
- Get Started with Google Workspace Tools Skill Badge — Google | December 2024
- DataCamp Scholar (2024 – Present) — Actively completing Python programming and statistical analysis courses

AFFILIATIONS & ACTIVITIES

- GDG PUP Software Cadet (Oct 2023 – Oct 2024) — Gained foundational knowledge in software development methodologies
- GDG PUP Data and ML Cadet (Nov 2024 – Nov 2025) — Participated in ML workshops and data analysis challenges
- Cisco NetConnect PUP Networking Cadet (Dec 2024 – Nov 2025) — Networking architecture and security fundamentals
